Orton Shower Enclosure Quality

SHOWER ENCLOSURES

The Orton shower enclosures are made in accordance to the European Directive 89/106/CEE (Construction Products) and to the following updated modifications introduced by the European Directive 93/68/CEE. The previous directives, carried out, are guaranteed by Orton harmonized norm application EN14428:2004 (Shower panels – Functional requirements and trial methods). In particular the norm EN14428:2004 requires the product inspection through suitable tests of cleaning characteristics, shock resistance, corrosion resistance, chemical agents and stain resistance, resistance to the damp/dry complete cycles, opening/closing doors cycles duration and stability and waterproofing.

All equipment and computer tests the Orton products to the extreme

STABILITY

Open-Close life cycles (stress endurance, ref. 4.4.5 EN14428)

The endurance and the time life of the moving doors is tested with 20,000 open-close cycles.

Profiles corrosion resistance (ref. 4.4.2 EN14428)

The profiles paint and treatments endurance is verified via a "square" test. The surface of the profile is deeply engraved with sharp blades. The incisions are applied with a "comb" pattern and are perpendicular creating a set of small "squares"; the test is considered positively passed if no more of two squares detach from the profile.

Glass panels endurance against chemical agents and machinery (ref. 4.4.3 EN14428)

The non-tarnish molecular structure and the aesthetic aspect of the glass panels is tested applying a chemical for 2 hours upon a mm. 100x100 glass sample; the test is considered positively passed if, after rinsing, the sample doesn't show any deterioration, stain or abrasion.

Glass panels endurance to wet-dry cycles (ref. 4.4.4 EN14428)

The non-tarnish molecular structure and the aesthetic aspect of the glass panels is tested with a glass sample (cm. 100x100) subjected to 20 immersion cycles at 80°C temperature for 8 hours and sub-sequential rest for 16 hours at room temperature; the test is considered positively passed if the sample doesn't show any crack, chip or loss of color.

Stability of the shower enclosure (ref. 4.4.6 EN14428)

Safety is guaranteed by a test that simulates the weight of a human body against the glass panel (i.e. a shoulder hit or a fall). A heavy object is banged against every shower enclosure panel. The test is considered positively passed if the panels don't show any harmful part.

Water test (ref. 4.4.7 EN14428)

The water tightness of the joints and the seals is verified spraying directly the critical areas of the shower enclosure with high pressure water.

CRASH TEST/FRAGMENTATION Glass fragmentation test (crash test, ref. 4.3.2 EN14428).

The norm states that, in the event of a breakage, the glass fragment must be smaller than the maximum allowed measure in order to protect the end-user safety. A glass sample of 1.7 square meters is broken and the test is considered positively passed if the count of fragments is less of 40 within an area of mm 50x50.

Crash test for polystyrene panels (crash test ref. 4.3.3 EN14428).

The norm states that, in the event of a breakage, the polystyrene fragment must be smaller than the maximum allowed measure in order to protect the end-user safety. A glass sample of the size of mm.1930x865 is broken: the test is considered positively passed if the fragments are bigger than the minimum size allowed by the regulation.

NANOCOAT.

Glass Treatment

WITH NANOCOAT

WITHOUT NANOCOAT

8mm 6mm 5mm 4mm

GLASS THICKNESS

Toughened safety glass thickness.

SMOOTH RUNNING WHEELS

Quality wheels mean doors glide along effortlessly and silently.

RISE AND FALL HINGES

Ensure doors open and close with ease.

CONCEALED FIXINGS

The cover profiles click easily into place during installation and combine with top caps to ensure that all fixings are concealed.

HORIZONTAL ADJUSTMENT

Allows perfect fitting to out-of-true walls. Check each collection for adjustment values.

HORIZONTAL AND VERTICAL ADJUSTMENT

The profile can be adjusted both vertically and horizontally to allow fixing into grout lines rather than into tile centres.

POWER SHOWER PROOF

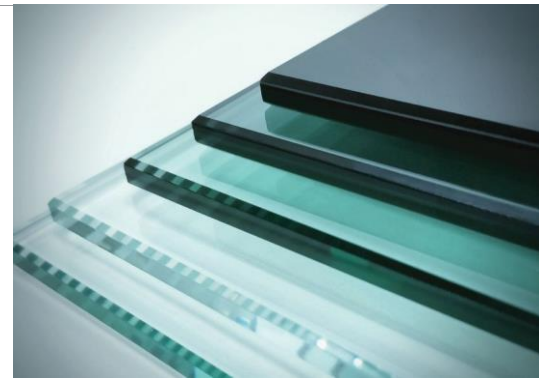

The enclosures have been tested to ensure that they are power shower proof, so even with the most invigorating of showers the seals remain water tight.

GUARANTEE

All Ideal Standard Shower enclosures are backed by our comprehensive guarantee.

Quadrant Shower Enclosure

A quadrant shower closure brings both luxury and functionality to your bathroom. With glass doors that slide open, a quadrant unit is a space-saving solution that suits the layout of small bathrooms and modern design schemes alike.

Quadrant enclosure styles look fantastic and fit perfectly in to either small or large settings and are easy to maintain too!
