MAINTENANCE & CARE

GENERAL MAINTENANCE IS WONDERFULLY SIMPLE

Increase the lifespan of your orton products and prevent the build-up of dirt and limescale. by simply wiping down your sink and work-top surface with a damp cloth and soapy water. This simple tip will keep your products looking great. Discover more top cleaning tips below.

CLEANING & CARING FOR STAINLESS STEEL

EVERYDAY TIPS

Our stainless steel sinks are made of premium chrome-nickel steel. This high-quality material makes our sinks eye-catching and resistant to stains, rust and corrosion. So we created Inox Cream specifically for the care and maintenance of this special material. This polish is easy to apply and can protect or restore the luster of your sink. Just spread a little on a damp cloth, rub it lightly onto the surface and allow it to set. Then just rinse it off with water and polish with a dry cloth.

SCRATCHES

Unless they're very deep and unsightly, scratches on stainless steel surfaces aren't always bad. In fact, over time, lots of small scratches can add an attractive matte look to your products. But in the event that you have a deep scratch that you want to care for, here's what you can do: take a 3M Scotch-Brite pad and our white Inox Cream. Apply enough of the cream to cover the scratch and then wipe the area with your pad going with the grain of the surface. Once the scratch looks like it has been wiped away, rinse off any excess cream and clean the surface with a dry cloth.

STUBBORN STAINS AND RUST

Any rust that appears on stainless steel is the result of iron particles coming from external sources. If you want to remove any rust stains from your products, we recommend using a cleaning agent containing oxalic acid (e.g. Bar Keepers Friend®). Always use mild, non-abrasive cleaning agents to remove stubborn stains from your stainless steel and make sure you thoroughly rinse away any cleaning liquids once finished. Oh, one more thing, when cleaning your stainless steel, NEVER USE STEEL WOOL PADS. We, and our stainless steel, thank you in advance.

WHAT TO AVOID

- Bleaches containing
- hypochlorite Silver dip cleaners
- Leaving foods like citrus fruit juice, salt, vinegar, mustard, pickles and mayonnaise on your surface for prolonged periods. These foods can cause pitting and corrosion
- Strong acids like photo developing liquids or denture cleanser. If they come in contact with your sink, they should be washed away immediately with clean water.
